237 CC Owner’s Manual
Revised October 2020
Dear New Cobia Owner,

On behalf of Cobia Boats, I would like to congratulate you on your purchase. We at Cobia strive to build the best products possible and wish you years of trouble-free enjoyment. There are many things to know about the operation, care, and maintenance of our products and the systems we install in them. Please review all the applicable information for your new boat. The more you know, the more you will enjoy your new Cobia.

Again, a heartfelt thank you from myself and the whole Cobia Family.

Scott Deal
President and CEO

We recommend you print this document and store it at the helm station.
Maintenance & Cleaning

Maintenance

Cobia advises owners that maintenance and repairs should be performed at an authorized Cobia Dealer. The following information is general in nature and should not be considered a repair manual or guidelines set forth by Maverick Boat Group.

Cleaning

Each Cobia boat is constructed using the finest materials and components available. However, no material is immune to the ravages of the saltwater environment. After each use, your boat should be thoroughly washed using fresh water. To avoid water spots, dry your vessel using a soft cloth. A fiberglass wax may be used to preserve the luster of the hull.

Thorough and routine cleanings of your stainless fittings are required to maintain their appearance. After each use of your boat, clean stainless fittings using fresh water and a mild soap. Dry fittings completely. A wax or polish may be applied after cleaning. Any rust must be removed as soon as possible to prevent irreversible damage to your vessel and/or its components. A light coat of lubricant on metal railing, screws and electrical connections will help prevent electrolysis. The same holds true for your trailer. Refer to page 26 for upholstery care and cleaning instructions.
Engine Break-In Period

New engines require a period of break-in to allow the surfaces of the moving parts to mate evenly. Different engines require different break-in periods and methods. For instructions on break-in methods, refer to your Yamaha Engine Owner’s Manual for the correct break-in procedures and times for your model engines.

Engine Stop Switch

If activated, the spring-loaded engine stop switch will automatically shut down the engine during emergency situations to prevent uncontrolled or unattended operation. Certain emergency conditions (e.g., turbulent water, wakes, unanticipated movement) may impair a person’s ability to operate the craft safely. The switch, located on the helm, must have the safety lanyard attached at its base. This activates the protective shutdown circuitry.

Securely attach the other end of the lanyard to the operator of the boat. If the operator moves, falls or is at an unsafe distance from the steering wheel, tension on the lanyard will pull it from the switch. When the lanyard is removed, the engine stop switch is released and automatic engine shutdown occurs.

DANGER:

An engine stop switch system that is not used or does not function properly can cause death or serious injury. DO NOT operate the boat if the engine stop switch system does not function properly. Go to a Cobia Dealer to have this resolved immediately.

The lanyard should be securely attached to the boat operator at all times that the engine is on.
Helm & Command Link Gauges

Switch Panel & Helm
At the helm of your Cobia, you have a main switch panel, which is located to the left of the steering wheel. This panel controls your lights, horn, accessories, livewell, and your bilge. When a switch is in the “on” position, its tip is illuminated. This alerts you that the associated accessory should be functioning and also reminds you to turn it off during boat shutdown. When the “NAV” light switch is in the “on” position, the labels for the switches will be illuminated. To the right of the steering wheel you have your two trim tab switches (refer to page 17 for trim tab operation). The boat also comes standard with a compass mounted on top of the console.

Command Link Gauges
Yamaha’s new 6YC Command Link gauge comes standard on your new Cobia. This gauge allows access to more information and is user-selectable so you can choose the functions displayed. Speed data can be displayed from a pitot tube, Triducer, or NMEA protocol GPS unit. To learn the gauge’s full functionality, refer to your Yamaha engine owner’s manual located in the Cobia Duffel Bag.

Cobia Duffel Bag
Along with your boat, you received a Duffel Bag with your new Cobia. Inside the Duffel Bag are the following items:

- Large Livewell Standpipe
- Short Livewell Standpipe
- 1.5” Livewell Pacifier Plug
- 2 ignition Keys and Emergency Kill Cord /Engine Stop Lanyard
- Engine Start Cord
- Various Accessories Manuals
Fuel-Water Separator & Drain

Fuel-Water Separator

A Yamaha Fuel-Water Separator is installed behind the aft seat assembly. Simply lift up the seat and you will be able to easily access the Fuel-Water separator. The new, improved 10-micron filter provides superior filtration ahead of the engine’s on-board filters and injectors. Large filtering and water capture areas maximize filtration while maintaining adequate flow rate for larger engines. The fuel separator can be checked by removing it from the mounting bracket and dumping it into an approved waste collection device. If there appears to be an excessive amount of water, the filter component should be replaced. See your authorized Cobia Dealer for replacement parts.

Maintenance Note: Yamaha recommends replacing the 10-micron fuel filter on new boats after the first 10 hours or 1 month of operation and every 50 hours or every 6 months thereafter. In areas of high humidity where water in fuel supplies is a problem or extensive engine operation occurs, more frequent replacement may be necessary.

Garboard Drain Plug

The garboard drain plug is the small metal plug located at the lowest point on the hull, at the bottom of the transom right above the keel. The drain has been designed so that it can be loosened by hand while the hull is out of the water for draining. This allows the plug to stay in contact with the surrounding frame so you’ll never misplace or lose it. You can completely remove the insert by pulling back and continue turning in a counterclockwise motion. It is manufactured with a rubber seal in place to ensure your bilge is watertight. Always make sure before putting the boat in the water that this plug is hand tightened firmly. Excess water in the bilge may be an indication of a problem with this plug or the automatic bilge pump.
Bilge

Bilge Access

Accessing the bilge in the 237 is made easy. To access the compartment, disengage the latch and lift the entire back panel up so that the compartment is revealed behind the seat. This compartment holds the bilge and other important features. With effortless accessibility comes peace of mind on the water, as the ball valves are easily accessed in case of an emergency.

Located on the aft seating is a gas shock that ensures that the entranceway is safe and secure in choppy waters. Once open all the way, the shock locks into place and can only be released by pushing up on the metal slide that covers the shock. Before closing, make sure to disengage the catch on the supporting gas shock. Failure to do so will break the gas shock.
Bilge

The bilge of your Cobia should always be checked before and after a launch. While checking the bilge, note that a small amount of water in the bilge is normal. However, a large amount of water or any signs of fuel or oil requires immediate attention. **If such a situation exists, the boat should be taken to a certified marine technician immediately. Never pump fuel or oil overboard while your boat is in the water.**

Large quantities of water in the bilge may be an indication of a leak or that the bilge pump and/or automatic float switch is not functioning properly due to a jam, clog or electrical issue. The automatic float switch is wired to the hot side of the battery switch through the “BILGE” fuse at the battery switch panel. When functioning properly, the float switch activates the bilge pump to pump water overboard once water in the bilge reaches a level that submerges the switch.

If the bilge pump does not come on when the float switch is submerged, attempt to manually turn it on through your switch panel. If the bilge pump comes on and evacuates the water, it is clear that the float switch is not functioning properly. If the bilge pump does not come on via the switch panel, check the breaker panel inside the console to see if a breaker has been tripped. If the breaker has been tripped, reset it and turn the switch on again, listening for the bilge pump to turn on.

If the bilge pump fails to turn on, turn the battery switch to the OFF position, then unhook the bilge pump from its cradle by pressing the locking tab and twist motor housing counter-clockwise. You will feel the pump release from the cradle. The entire bilge pump and wiring should release from the cradle. After removing the pump, check the underside and impeller areas for miscellaneous items that might clog the pump. If any obstructions are present remove the debris and set the pump back into the cradle. Once set back in the cradle, press the pump down on the base then twist until the lock button snaps it into place. Once this is completed you can try to turn the pump on again.

If the bilge pump still does not turn on, it likely needs to be replaced. It is not recommended to use your boat if the bilge pump and/or float switch are not functioning properly.
Systems

Ball Valves

Ball valves can be used to serve several purposes. They allow seawater to enter the boat, in the case of livewells, and they also act as a safeguard to stop water from entering. To tell which position a ball valve is in, open or closed, look at the valve and determine the direction of flow. When the ball valve handle is in the same position as the direction of flow, the valve is in the “OPEN” position. When the ball valve handle appears to cross the direction of flow, the valve is in the “CLOSED” position. The ball valves can be accessed in the bilge compartment behind the aft seating.

237 Deckdrain System

The deckdrain system is equipped with 1 1/2” thru hull fittings through the aft port and starboard hull sides. These fittings have to be installed lower than the drains in the cockpit floor so that gravity will allow the cockpit to drain free of water. This puts these fittings very close to the water line of the hull. These drains are rigged with ball valves that can be opened and closed to control the flow of water. In the open position, these ball valves will allow water to flow freely from the cockpit, thus making the boat “self-bailing”. When closed, no water will be allowed to travel to or from the cockpit.

237 Livewell Pump Assembly

The livewell pump assembly is composed of a scoop strainer mounted to the bottom of the hull, a thru hull fitting, ball valve assembly, and the pump. As you can see, the ball valve assembly is in the “OPEN” position. This is the correct position for the operation of the livewell.
Cockpit Courtesy Lights

The cockpit comes equipped with three LED courtesy lights installed at the factory. These lights illuminate the entire cockpit and are controlled by the switch panel. The switch labeled “COCKPIT LTS” controls the courtesy lights. The courtesy lights are mounted beneath the port and starboard gunwales as well as at the bow, aft of the anchor locker.

Battery Switch Panel

The battery switch panel is located at the aft starboard cockpit. The top switch is for your engine(s) battery(s). The bottom switch is for your house battery which powers all of your electronics and accessories. Both switches must be turned to the “ON” position in order to fully operate your boat.

If your engine(s) battery(s) is too low to crank your engine(s), you can turn the engine switch another quarter turn to the “emergency parallel” setting as denoted by the yellow area at the 5 o’clock position on the label. This will allow the house and engine batteries to combine and provide enough power to crank your engine(s). Once the engine is cranked and on, turn the switch back to the “ON” position so that the engine begins to charge its battery back
up again. Leaving the switch in the “emergency parallel” may also risk electrical damage to your accessories and engine. When you’re finished using your boat, turn both switches to the “off” position to prevent any current drain while the boat is not being used.

**Ladder & Props**

**Stainless Boarding Ladder**

This Cobia model comes standard with a telescoping stainless-steel boarding ladder integrated into the port aft platform area. This provides a stepping area while the ladder is in the up position. Once the ladder is down and in the extended position, close the lid cover for safe and secure entry and exit via the ladder. When washing off your boat at the end of the day make sure to extend the ladder and wash it off as well, making sure to dry it completely before stowing. Leaving saltwater in the telescoping tubes may lead to corrosion and affect the useful life of your ladder.

---

**DANGER:**

No passenger should attempt to enter or exit the boat by the ladder or by any other means while the engine is on.
Props

Prop selection on your Cobia is determined by your local Cobia Dealer, but all props are based on recommendations from Cobia Boat Company and Yamaha Marine in order to give your boat maximum overall performance. The needs of your prop will determine the prop design and size that best fits your performance requirements. Always inspect the engine and prop prior to launching your boat with the engine off. Key prop issues include tangled fishing line or other types of debris, cracked blades or fluid leaking out of the seal. Look for fishing line tangled around the prop or lower unit seal. **Consult your Yamaha Owner’s Manual to address these issues.**

Fuel System

Fuel System

This Cobia comes equipped with a 120-gallon fuel cell stationed below the leaning post between the stringer system. The fuel fill receptacle is on the port gunwale. Every fuel tank is pressure tested at the factory before and after installation. Should you experience any fuel related problems or suspect problems with the fuel system, immediately take your boat to a Cobia Dealer.

---

**DANGER:**

Do not smoke while filling the tank. Be sure to turn off the engines and all electrical equipment when fueling the boat to prevent accidental discharges of static electricity. Use only the recommended gasoline (see Yamaha Owner’s Manual). Do not use fuels with alcohol or alcohol related derivatives that can cause marine fuel system hoses to deteriorate.
Self-Bailing Cockpit & Livewell

Self-Bailing Cockpit

The cockpit is designed to be self-bailing, meaning that all the water that comes into the cockpit will be directly drained overboard. This keeps the boat from acquiring standing water and allows the boat to drain at all times, including while the boat is docked.

Water drains out of the cockpit through two aft cockpit drains located at the far aft cockpit floor on both the port and starboard sides. Each side drains overboard through the side of the hull independently. None of this water is drained into the bilge. Refer to page 11 for operation of the ball valve associated with this system.

The bilge is designed to drain any water entering the inside of the hull. All hoses are sealed and double clamped during construction. Continuous or periodic running of the automatic bilge pump may be an indication of a hose leak or break in a seal and should be investigated by a Cobia Dealer immediately. Refer to page 10 for further information regarding bilge pump operation and maintenance.

Livewell System

The livewell system is designed to keep your baitfish alive and strong for as long as possible. This 28-gallon livewell provides a cool, clean, and oxygenated environment that allows you to keep your baitfish alive for long periods of time. To efficiently operate your livewell, the following steps should be taken:

1. **Open livewell hatch.**
2. **Install stand-up pipe snugly.**
3. **Ensure livewell pump ball valve is in open position.**
4. **Turn on livewell switch.**
The livewell operates by pumping fresh seawater from the pump through an aerator head into the livewell. Drainage is achieved through the grate on the top of the standpipe, which, when unobstructed, will limit the water level to the standpipe’s highest point. A shorter standpipe can be used to keep less water in the well. This constant drainage keeps up water flow and allows for the removal of ammonia from the livewell, therefore extending the life of your baitfish. To drain the livewell, switch off the pump, close pump ball valve, and remove standpipe.

**Rod Storage & Fish Lockers**

**Rod Storage**

The 237 Center Console model comes standard with under gunwale rod racks on both the port and starboard sides. These give you space to safely store an additional 6 rods for your fishing needs.

**Port and Starboard Fish Lockers**

The 237 CC has two 80-gallon fish lockers located port and starboard of the cockpit. These lockers are insulated and drain overboard through independent thru hulls on each side of the hull just below the boxes. These lockers can also double as storage for various other items.
Anchor Locker

Anchor Locker/Rode Storage

The anchor locker is located at the bow of the boat and is accessible through the anchor locker door or hatch (photo below). There is an eye mounted to the bow eye to secure your anchor rode or chain to. After setting your anchor, the excess rode can remain stored in the locker. The notch supplied in the door allows you to securely close the locker by aligning your rode through the notch.

Trim Tabs

Trim Tabs

Bennett trim tabs are standard on your new Cobia. Integrated electric trim tabs can enhance the performance of your boat. The tabs are electric and therefore do not require a trim tab pump. By not having a pump there is no possibility of fluid leaks from a pump.

Trim tabs allow for maximum boat performance and are great for balancing weight in the boat. They also allow the boat operator to lift or lower the hull to accommodate for different running situations.

For the operation of trim tabs note that the port trim tab switch will affect the port side of the boat, and the starboard switch will affect the starboard side. To lower a particular side, press the top of the corresponding switch down. Pressing the top of both switches down will lower the bow evenly. To raise the bow, press the bottom of the corresponding switch.
Optional Features

Optional Bow Cushion Set

The 237 CC comes with the option of a six-piece bow cushion set. These cushion bottoms are removable and are held in place by several sets of stainless-steel snaps. To remove the cushions, simply pull the snap strap away from the embedded snap and remove the cushion. When left outside or exposed to the elements for a prolonged period of time, it is recommended to take off the seat cushions and store them in a dry place. Refer to page 26 for cushion care instructions.

T-Top

There are several different T-Top options for the Cobia 237 CC. The T-Tops come with either a Weblon or a fiberglass hard top. Each of these tops has the option of being outfitted with an electronics box, forward and aft facing LED spreader lights, outriggers, recessed speakers and an E box for additional storage and electronic space.

Optional JL Stereo System

If you chose the stereo option, your 237 CC came with a JL Audio Stereo system Media Master 50 with four matching speakers and an auxiliary plug located under the helm in the glove box. Please refer to the JL Audio Owner’s Manual in your ditty bag for operation. Even if your boat didn’t come with the stereo, it is pre-wired for four speakers in the cockpit and for four speakers in the hardtop.
Optional Fresh Water Washdown

The fresh water tank on your 237 CC can be filled at the cap labeled “WATER” on the starboard transom. The hose nozzle is on the port aft bulkhead. To pressurize the system, flip the switch labeled “FRESWATER” on the switch panel at the helm. You can leave this switch in the ON position while the boat is in use. The pump has an internal pressure switch that allows the pump to turn on and off as needed.

In the colder months of the year, it’s advisable to drain the fresh water system and winterize by adding a non-toxic antifreeze to the system. Run the antifreeze throughout the system by opening shower nozzle until antifreeze is delivered through the shower head.

Optional Salt Water Washdown

Raw-water washdown is an option on the 237 center console model. The pump is located in the bilge forward of the livewell pump and is accessible through the splashwell hatch. To operate, hook a hose to the raw water receptacle in the aft section of the rod locker. Flip the switch labeled “Saltwater”. The pump will pressurize the system with raw water. Once the system is pressurized, the pump will shut itself off with an internal pressure switch and will switch itself back on as you demand water. Be careful to only spray gel-coated fiberglass surfaces with saltwater and avoid all other areas. Always rinse your boat with freshwater as soon as you return to the dock or home if the boat is being trailered.

Optional Waste System

A portable head unit is an option in the 237. The instruction manual can be found in the Cobia duffel bag and basic operating instructions are listed here.

The optional head pump out fitting is located on the starboard side of the console. With this option, waste can be removed at an approved dumping station without removing the tank from the head.
**Portable Toilets Owner’s Manual**

**Manual del propietario Inodoros portátiles**

**Guide de l’utilisateur Cabinet portatives**

---

**Prepare Unit**

1. Separate tanks (Fig. 1A & 1B).
2. Remove Pour-Out Spout Cap while it is pointing upward (Fig. 2A & 2B) add deodorant and 4-oz. of water (Fig. 2C). Replace cap and tighten securely.
3. Recombine tanks (Fig. 3).
4. Fill upper tank with fresh water (Fig. 4). Replace cap and tighten securely.

**NEVER add deodorant to fresh water tank.**

---

**Prepare la unidad**

1. Separe los tanques (Fig. 1A y 1B).
2. Saque la tapa del caño de vertido manteniéndola orientada hacia arriba (Fig. 2A y 2B), añada desodorante, y 118 ml de agua (Fig. 2C). Vuelva a colocar la tapa y apriétela bien.
3. Vuelva a acoplar los tanques (Fig. 3).
4. Llene al tanque superior con agua fresca (Fig. 4). Vuelva a colocar la tapa y apriétela bien.

**NUNCA vierta desodorante en el tanque de agua.**

---

**Before Use**

Vent any built-up heat or altitude pressure and prevent splashing: close cover (Fig 5A), and open and close holding tank valve (Fig 5B):

**To Flush**

1. Open valve (Fig 5B).
2. Bellows: Fig. 6.
   - Piston Pump: Fig. 7.
3. Close valve completely for odor-tight seal (Fig 5B).

---

**Para pasar el agua**

1. Abra la válvula (Fig 5B).
2. **Fuelle:** Fig. 6.
   - **Bomba de pistón:** Fig. 7.
3. Cierre bien la válvula para evitar los malos olores (Fig 5B).

---

**Prepare l’unité**

1. Séparer les réservoirs (Schémas 1A et 1B).
2. Retirer le capuchon du bec verseur pendant qu’il pointe vers le haut (Schémas 2A et 2B), ajouter le désodorisant et 118 ml d’eau (Schémas 2C). Replacer le capuchon et resserrer hermétiquement.
3. Recombiner les réservoirs (Schéma 3).
4. Remplir le réservoir supérieur d’eau propre (Schéma 4). Replacer le capuchon et resserrer hermétiquement.

**Ne JAMAIS ajouter de désodorisant au réservoir d’eau propre.**

---

**Antes de usarlo**

Deje escapar la presión que se haya acumulado debido al calor o a la altura; evite las salpicaduras: Cierre la tapa (Fig 5A), abra y cierre la válvula del tanque de retención (Fig 5B).

**Para pasar el agua**

1. Abra la válvula (Fig 5B).
2. **Fuelle:** Fig. 6.
   - **Bomba de pistón:** Fig. 7.
3. Cierre bien la válvula para evitar los malos olores (Fig 5B).

---

**Avant d’utiliser**

Ventilier en cas de pression accumulée ou attributable à l’altitude et prévenir les éclaboussures : fermer le couvercle (Schéma 5A), ouvrir et fermer la valve du bac à eaux usées (Schéma 5B).

**Pour vidanger**

1. Ouvrir la valve (Schéma 5B).
2. **Soufflets de dilatation :** Schéma 6.
   - **Pompe à piston :** Schéma 7.
3. Fermer la valve complètement pour une étanchéité contre les odeurs (Schéma 5B).
Emptying Waste Tank
1. DO NOT OVERFILL TANK. Empty when waste level indicator turns from green to red (Fig. 8). (Toilet without an indicator: open valve to check visually.)
2. Be sure valve handle is closed. Separate tanks (Fig. 9).
3. Carry waste tank to a permanent toilet.
4. Remove Pour-Out Spout Cap while it is pointing upward (Fig. 10A & 10B).
5. Press air relief valve to prevent splashing (Fig. 11).
6. Rinse, recharge and reassemble unit.

Para vaciar el tanque séptico
1. NO LO LLENE DEMASIADO. Vacíelo cuando el indicador de nivel cambie de color VERDE A ROJO (Fig. 8). (Inodoro sin indicador: abra la válvula para examinarla.)
2. Verifique que el asa de la válvula esté cerrada. Separe los tanques (Fig. 9).
3. Lleve el tanque séptico a un inodoro fijo.
4. Saque la tapa del caño de vertido manteniéndola orientada hacia arriba (Fig. 10A & 10B).
5. Oprima la válvula de descarga de aire para evitar las salpicaduras (Fig. 11).
6. Lave, recargue y vuelva a armar la unidad.

Vidange du bac à eaux usées
1. NE PAS TROP REMPLIR LE RÉSERVOIR. Vider lorsque l’indicateur du niveau de déchets passe du vert au rouge (Schéma 8). (Toilette sans indicateur : ouvrir la valve pour une vérification visuelle)
2. S’assurer que la poignée de la valve est fermée. Séparer les réservoirs (Schéma 9).
3. Transporter le bac à eaux usées vers une toilette fixe.
4. Retirer le capuchon du bec verseur pendant qu’il pointe vers le haut (Schéma 10A & 10B).
5. Appuyer sur la soupape de dégagement d’air pour prévenir les éclaboussures (Schéma 11).
6. Rincer, recharger et réassembler l’unité.

Deodorizing
Recommended holding tank deodorant for best performance:
Thetford Eco-Smart
Thetford Aqua-Kem
Thetford Campa-Chem

Para desodorizar
Desodorante recomendado para un mejor funcionamiento del tanque de retención:
Thetford Eco-Smart
Thetford Aqua-Kem
Thetford Campa-Chem

Désodorisant
Désodorisant recommandé pour le bac à eaux usées pour une meilleure performance :
Thetford Eco-Smart
Thetford Aqua-Kem
Thetford Campa-Chem

Care
Recommend cleaner:
Thetford Aqua-Clean.
NEVER use scouring powders, acids or concentrated cleaners, which can damage plastic parts and rubber seals.

Mantenimiento
Producto de limpieza recomendado:
Thetford Aqua-Clean.
NUNCA use polvos para limpiar, ácidos ni productos de limpieza concentrados, que puedan dañar las piezas plásticas y las juntas herméticas de caucho.

Entretien
Ce nettoyant est recommandé :
Thetford Aqua-Clean.
Ne JAMAIS utiliser de poudres de récurg, d’acides ou de nettoyeurs concentrés qui peuvent endommager les pièces en plastique et les joints d’étanchéité en caoutchouc.
Service & Parts
For parts and/or service, contact your RV Dealer.
For warranty issues or more information, call Thetford’s Customer Relations Department:
1-800-521-3032

Servicio y repuestos
Para repuestos y servicio, comuníquese con el distribuidor de VR local.
Para asuntos relacionados con la garantía o mayor información, llame al departamento de Relaciones con el cliente de Thetford:
1-800-521-3032

1. Your name and address
2. Toilet Model and Code from ID label.
3. Problem/reason for claim.
4. Proof of date of purchase.

Parts List
- All Models
  1. No-Spill Water Fill Cap
  2. Seat and Cover Assy
  3A. Pour-Out Spout
  3B. Pour-Out Spout Cap
  4. Hold Down Kit (optional)
  5A. Piston Pump Assy
  5B. Bellows Pump Assy
  6. Fresh Water Tank Assy, incl. bellows
  7. Waste Holding Tank w/o Spout

Liste des pièces
- Tous les modèles
  1. Capuchon de remplissage pour prévenir le déversement d’eau
  2. Assemblage du siège et du couvercle
  3A. Bec verseur
  3B. Capuchon du bec verseur
  4. Trousse de matériel (facultatif)
  5A. Assemblage de pompe à piston
  5B. Assemblage de pompe à soufflet
  6. Assemblage du réservoir d’eau propre, y compris les soufflets de dilatation
  7. Bac à eaux usées sans bec verseur

COBIA 237 CENTER CONSOLE 1
Upholstery Care & Cleaning Guide

For use on the white or the primary seating vinyls only!
For cleaning and care of accents and colors, please refer the back of this card.

Remove most stains with one of the following steps:

Step 1: If cleaned immediately, use a clean dry cotton fabric. Wipe once, carefully to remove most of the stain without spreading to surrounding area. Wipe more vigorously a second time if residue remains and proceed to step 2.

Step 2: If residue remains use a straight application of the following concentrated cleaners:
- Formula 409®
- Fantastik®

Wipe with a clean cloth, rinse with water and dry. If residue remains, proceed to step 3.

Step 3: More stubborn soils may be eliminated using a cotton fabric soaked in 91% isopropyl (rubbing) alcohol. Wipe without spreading stain to surrounding area. A second application should be applied with vigorous rubbing in a circular motion. For highly textured material, a soft toothbrush is recommended to clean valleys and crevices. Wipe with a clean cloth, rinse with water and dry.

Certain clothing and accessories dyed (such as those used on denim jeans) may migrate to lighter colors. This phenomenon is increased by humidity and temperature and is irreversible.

Please check compatibility when using this product in combination with painted or varnished surfaces.

Always remove stains immediately. Upholstery must be kept CLEAN!

Certain household cleaners, powdered abrasives, steel wool, and industrial cleaners can cause damage and discoloration and are not recommended. Dry cleaning fluids and lacquer solvents should not be used as they will remove printed pattern and gloss. Waxes should be used with caution as many contain dyes or solvents that can permanently damage the protective coating.

Suntan lotion, tree pollen, wet leaves, and some other products can contain dyes that stain permanently.

Do not clean with power washers, as they can generate 3500 PSI and could damage the surface of your interior. Do not use kerosene, gasoline, or acetone, as they will remove the protective marine top coat. Do not use any silicone-based protectants. They will extract the plasticizer, leaving vinyl hard and brittle, and eventually cracking will occur.

Failure to care for your vinyl properly, or use of improper cleaners, may void your warranty & damage your vinyl!

Some of the recommended products are:
- Formula 409®
- Fantastik®
- Phostrip®
- Sea Dye Remover
- Carbona®
- Upholstery Cleaner

Please check compatibility when using this product in combination with painted or varnished surfaces.

Vinyl Coated Fabrics (Acrylic or Napa Topcoat)

Cleaning and Care: Colors and Accent Vinyls

Step 1: For light soilings, a solution of 10% household liquid dish soap in warm water, applied with a soft damp cloth. Rub gently and rinse with a water-dampened cloth.

Step 2: For heavy soilings, dampen a soft white cloth with a one-to-one (1:1) solution of *Formula 409*® and water or *Fantastik*® and water. Rub gently and rinse with a water-dampened cloth.

Step 3: For more difficult soilings, dampen a soft white cloth with a solution of household bleach (10% bleach and 90% water). Rub gently and rinse with a water-dampened cloth to remove bleach concentration. Do not use with alcohol-based cleaning agents!

All cleaning methods must be followed by a thorough rinse with clean warm water.

Failure to care for your vinyl properly, or use of improper cleaners, may void your warranty & damage your vinyl!

Warranty

Cobia Boats are NMMA Certified and offer superior SeaTech “no wood” construction. All Cobias are backed by a no-nonsense, 10-year limited warranty.

Cobia Boats advises owners that an authorized Cobia Dealer perform maintenance and repairs on your boat. Self repairs and repairs done by a non-authorized Cobia Dealer may void the warranty on the boat. The following information is general in nature and should not be considered a repair manual or guidelines set forth by Maverick Boat Group.

Cleaning: Each Cobia Boat is constructed using the finest material and components available. However, no material is immune to the ravages of the saltwater environment. After each use, your boat should be rinsed thoroughly with fresh water. A mild detergent may also be used to remove any dirt, silt or stains. To clean the cushions, use only a damp cloth. Never hose down or saturate the cushions. A light coat of lubricants on metal railing, screws, and electrical connections will help prevent electrolysis. The same holds true for your trailer.
